

Managed Security Operations Centre (SOC) Services

Managing the complexities of cyber security operations for your business, easing for you the hassles of investing in technologies and managing a security team

Why Heron

Expertise

Deep subject matter expertise in international and local security regulations, standards, frameworks and technologies

Experience

Decades of experience in working in and with Enterprises and Government agencies and understand what it takes to defend against sophisticated threats

Relevance

Focused on the needs of mid-sized businesses and curated technologies and services to meet these needs

Why Managed SOC Service

Deal with Modern Cyber Threats

Companies of all sizes are now exposed to cyber attacks, with small and medium sized suppliers increasingly targeted. These threats are more complex requiring specialised expertise and experience of cyber security professionals.

Affordable

Managing organic cyber security teams and keeping them operational is expensive. Using a managed SOC service provider is the most cost effective way to maintain a high level of cyber security readiness without breaking the bank.

Focus on Outcomes

Leave the choice of technologies to us and avoid getting confused by the myriad of products and buying unnecessary services. We help you focus on the cybersecurity outcomes instead.

Managed SOC Service Flow

Heron is licensed by the Singapore Cybersecurity Services Regulation Officer (CSRO) to provide Managed SOC monitoring services.
